

## Scroll Trellis—Stack Trellis

The Stack Trellis is a four-pronged plastic trellising system for barrels, hanging baskets and anywhere else that support is needed for climbing or vertical plants. It's improved over the previous design by being injection molded, having attachment sites along the trellis for both plant vines and twine, and having the ability to stack kits on top of each other for taller plants, using the Add A Stack kit.

Stack Trellis Starter Kit with Add A Stack Kit.

## Scroll Trellis—Basket Booster

The Basket Booster is a topiary structure for both hanging baskets (baskets with wire hangers) and plant containers. Its unique function provides a 3-D support for taller plants, including the vining varieties, adding additional variety to the "thriller" category of plants. The Basket Booster comes as an easily-assembled compact kit. It can also be used for supporting solar powered LED string

lights, allowing plants to be enjoyed even after dark. Made with recycled UV protected high-density plastic, with a large interior for sunlight and air circulation. Scroll Trellis products are made in the USA by Accelerated Plastics.
