

Why purchase trellises that are pre-strung with Solar lights? Customer's love 'em!

Adding solar lights to the trellis strands is a truly unique décor option, **they won't help the plants stay green but may make the neighbors turn green!**

The Solar Lights are pre-strung or also may be purchased separately.

All-in-One
Hanger and
Trellis

The solar lights outline the trellis with an attractive glow increasing the sales appeal of the hanging basket or planter.

The LED lights consist of 4 strands that are 28 inches long that extend from a central solar panel that has a AA battery backup. (The battery is not included). Each strand of LED lights are pre-wrapped around each of the trellis strands or may be wrapped by the Grower if lights are purchased separately.

Latch-on-Pot
Trellis

The solar lights light up at dusk which increases the amount of time plants are visible to enjoy.

Each strand of lights has 20 LED lights strung on copper wire approximately every 1.5 inches, for outdoor use. Lights are cool to the touch. The solar lights have a 2 year lifespan.

Note the increased popularity of foliage with Gardeners which solar lights make visible at dusk

Latch-on-Pot
Trellis

The solar lights and plant combination add automatic evening ambiance, a festive feel to outdoor spaces and seasonal plants

They light up automatically, no cords are needed. The solar panel can be staked in the soil using the included stake or can be mounted at the top of the trellis if desired. The leading wire connecting the solar panel to the light strings is 3 feet long which allows the solar panel placement to be adjusted as the plant grows

The 2-way power switch allows the lights to be turned off, if desired. The 2-way function has an option for steady-on lights or flashing lights. Fully charged lights light up automatically and remain on for approximately 6 hours.
